

# What is Azure AI Studio?

Article • 11/16/2023

## ⓘ Note

**Azure AI Studio** is currently in public preview. This preview is provided without a service-level agreement, and is not recommended for production workloads. Certain features might not be supported or might have constrained capabilities. For more information, see [Supplemental Terms of Use for Microsoft Azure Previews](#).

Azure AI Studio brings together capabilities from across multiple Azure AI services.

**Azure AI Studio** is designed for developers to:

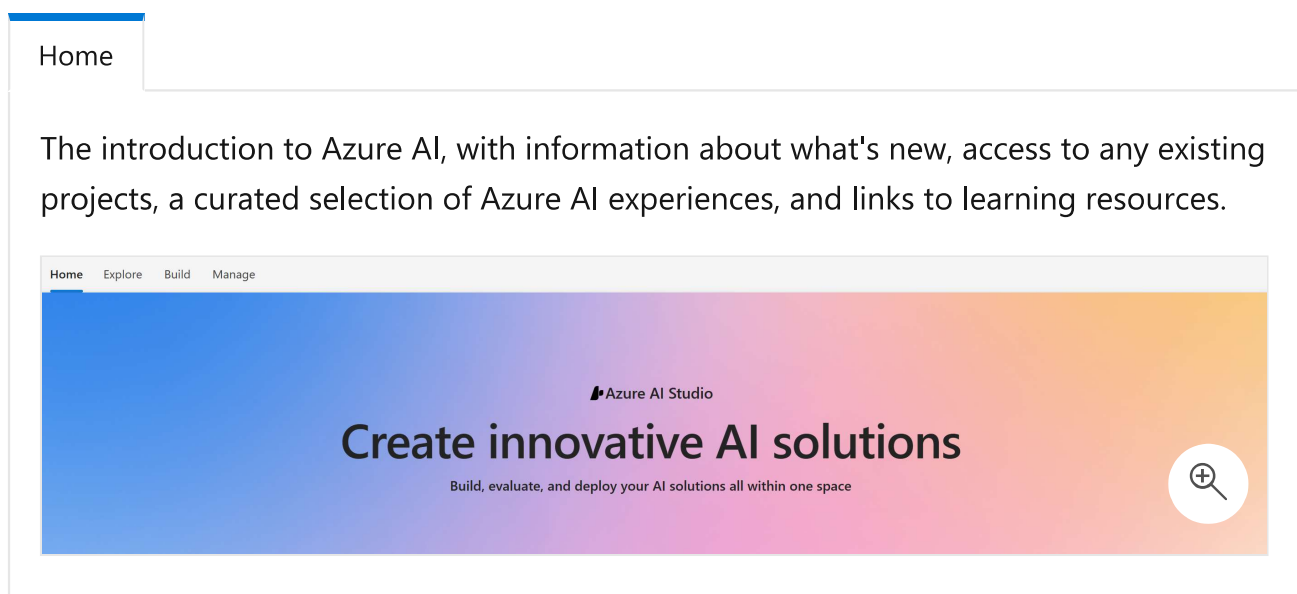

- Build generative AI applications on an enterprise-grade platform.
- Directly from the studio you can interact with a project code-first via the Azure AI SDK and Azure AI CLI.
- Azure AI Studio is a trusted and inclusive platform that empowers developers of all abilities and preferences to innovate with AI and shape the future.
- Seamlessly explore, build, test, and deploy using cutting-edge AI tools and ML models, grounded in responsible AI practices.

- Build together as one team. Your Azure AI resource provides enterprise-grade security, and a collaborative environment with shared files and connections to pretrained models, data and compute.
- Organize your way. Your project helps you save state, allowing you iterate from first idea, to first prototype, and then first production deployment. Also easily invite others to collaborate along this journey.

With Azure AI Studio, you can evaluate large language model (LLM) responses and orchestrate prompt application components with prompt flow for better performance. The platform facilitates scalability for transforming proof of concepts into full-fledged production with ease. Continuous monitoring and refinement support long-term success.

## Getting around in Azure AI Studio

Wherever you're at or going in Azure AI Studio, use the Home, Explore, Build, and Manage tabs to find your way around.

## Azure AI studio enterprise chat solution demo

## Pricing and Billing

Using Azure AI Studio also incurs cost associated with the underlying services, to learn more read [Plan and manage costs for Azure AI services](#).

## Region availability

Azure AI Studio is currently available in the following regions: Australia East, Brazil South, Canada Central, East US, East US 2, France Central, Germany West Central, India South, Japan East, North Central US, Norway East, Poland Central, South Africa North, South Central US, Sweden Central, Switzerland North, UK South, West Europe, and West US.

To learn more, see [Azure global infrastructure - Products available by region](#) .

## How to get access

You can explore Azure AI Studio without signing in, but for full functionality an Azure account is needed and apply for access to Azure OpenAI Service by completing the form at <https://aka.ms/oai/access> . You receive a follow-up email when your subscription has been added.
